Summary of most proposals 53
Proposal 1 – Changes to how Redistributions are performed 53
Proposal 2 – Audit electoral rolls for five (5) lowest turnout electorates 53
Proposal 3 – Improvements to early voting. 53
Proposal 4 – Re-defining what constitutes a formal vote for the HOR 54
Proposal 5 – Adopt the 8 bullet points listed under “Suggested changes and improvements to the voting and counting processes” above 54
Proposal 6 – Counting of all votes must be scrutinised by registered scrutineers 54
Proposal 7 – Changes to the sequence of election of Senators in a Group 55
Proposal 8 – Changes to the number of Senators elected by Territories 55
Proposal 9 – Fixed term elections. 55
Proposal 10 – Handling of people who turn 18 between close of rolls and election day. 55
Proposal 11 – Ensuring integrity at all polling locations. 55
Proposal 12 – JSCEM to determine if proportional representation in the House is constitutional. 56
Proposal 13 – New Senate Determination process. 56

Acronyms which may be used in this submission

ABS - Australian Bureau of Statistics

AEC - Australian Electoral Commission

ATL - Above the Line

BTL - Below the Line

CPV - Compulsory Preferential Voting

DoP – Distribution of Preferences

ERP – Estimated Resident Population

EVC – Early Voting Centre (see also PPVC - interchangeable)

HOR (or) House - House of Representatives

HTV – How-to-vote (cards/leaflets)

OPV – Optional Preferential Voting

PPVC – Pre-poll Voting Centre (see also EVC - interchangeable)

2CP – Two Candidate preferred

2PP – Two Party preferred

Data Sources

All raw data detailed in this submission is sourced from the AEC website unless otherwise stated.

Not all data may still be viewable on the AEC website as much of it was captured at point-in-time.

Background of the author

I was Assistant Inventory Controller for Repco Auto Parts & Checkpoint Brake Centres (Victoria and Tasmania) from the late 1980's until the mid-1990's. This included responsibility for the execution of the annual stocktake process. This involved over 100 sites, hundreds of thousands of line items worth tens of millions of dollars.

It was a complex process with many steps. All of which had to be executed in sequence over a period of weeks. And as a part of the company's financial obligations, it had to be accurate.

Over time, we modified the process, improved it, and streamlined it, as our technology evolved.

The major achievement during my time was to advance from recording the count at each of the branches on printed count sheets. These then had to be sent away, keypunched onto magnetic tape and entered back into the computer system weeks later.

Before I moved to my next role, that had evolved to each branch entering their count data online, into the computer system that night.

There are enough similarities between executing a stocktake of that magnitude, and executing an election, that the disciplines of one can be interchanged with the other.

I also hold internationally recognised certifications in IT Service Management – specialising in Change, Incident, Problem and Configuration Management.

What is a federal election?

A Federal Election is the people of Australia exercising their will and their voice through their vote. Choosing who they want to govern them for the next three years.

It is crucial, to both the electoral process and to National Security, that only those who are legally entitled to vote can vote; can prove who they claim to be, and vote only once.

No political party, no politically affiliated group, no government employee, government body, or authority, including, but not limited to, the AEC or the Commonwealth Parliament; no Member of the House, no Senator nor any constituted committee has any business creating or maintaining any law, condition, regulation, etc. which in any way, shape, or form, infringes, limits, excludes, places onerous conditions on, or in any other way restricts from being included in the count, any ballot paper completed by a legal voter in good faith and to the best of their capabilities.

Part 1. Before the election

New electoral boundaries are determined on failed methodology.

Without spending too much time on the background for how redistributed electoral boundaries are constructed, there are two key numerical criteria:

1. Current enrolment must be within +/-10% of the State Average at the commencement date.
2. Projected enrolment should be within +/-3.5% of the State Average at the 'projection time'.

Time and again, redistribution after redistribution, these projected enrolment numbers are not met. Not only are the projected enrolment numbers not met at Divisional level, they're not met for the entire State.

As an aside, there used to be an old joke page going around called "Glossary of Management Terms," the Management Term "Projection" was translated to the layman's term of "Guess."

And there have been many times when "Guess" has felt more apt than "Projection." More on that in the next section.

The long-term risk of continuing to use failed methodology is that some Divisions will require significantly fewer votes to elect members than other Divisions. Creating a kind of Gerrymander.

With the national average enrolment now more than 120,000 electors per Division; 10% variation either way from that average is almost 25,000 electors – 12,000 above & 12,000 below.

To reinforce my argument of failed methodology I provide examples of the last Redistribution for each of the three largest States which went the full 7 years.

Victoria's last full 7-year Redistribution was concluded back in 2010.

As per the table below, only 19 of 37 Divisions met the +/-3.5% requirement at the projection time.

McEwen was more than 10% above the target and its enrolled elector growth under-projected by almost 11,000.

Aston, Bruce, and La Trobe had their elector growth over-projected by greater than 4,000 electors each.

New South Wales' last Redistribution which ran 7 years was concluded in 2016.

Just 18 of 47 Divisions fell within the +/-3.5% allowance at the projection time. Meaning some 29 of 47 Divisions did not.

State-wide, the under-projection was over 100,000 electors.

Six Divisions had over 10,000 more electors than projected by the projection time.

Five Divisions were more than 5,000 electors under projected enrolment with Parramatta some 8,588 electors under projected enrolment.

Queensland's last 7-year Redistribution was completed in 2018.

Like NSW, most Divisions failed to be within +/- 3.5% of average enrolment at the projection time.

The State-wide under-projection was 134,750 electors, a 65% under-projection.

Consequently, 21 of 30 Divisions grew greater than the projected number.

Six of 30 Divisions grew more than 10,000 electors over projection, whilst Rankin grew at less than half the projected number.

Does anyone from the AEC go back and check how accurate these projections were?

Are there any Continuous Improvement methodologies being actioned?

If not, why not?

As the old saying goes, 'The definition of insanity is doing the same thing over and over again and expecting a different result.'

Either the process needs to show improvement or the methodology needs to change.

I propose the latter.

I believe that 'Trend' enrolment is a far more reliable methodology than 'Projected' enrolment.

'Capped Trend' limits the growth of any SA2 to double the current enrolment number or +10,000 electors from the current number – whichever is the lesser.

Trend enrolment is based on historical actual enrolment, so avoids any risk of error, or manipulation of projected data.

Given the AEC already publishes monthly enrolment figures, it should also be able to produce enrolment by Division at SA2, and even SA1 levels, as a base for calculating likely enrolment at projection time.

Seven years of factual data makes for a far sounder base for estimating enrolment a further 4 ½ years into the future.

Finally, the '+/- 3.5% in 3 ½ years' requirement needs to go.

Redistributions are performed approximately every 7 years, and for a division to remain within tolerance it needs to remain within +/– 10% of the State Average.

Given 3 ½ years is the mid-point between Redistributions, and half the tolerance variation is 5%; therefore, the current 3.5% tolerance at 3 ½ years should become 5%.

2023 Victorian and Western Australian Redistributions not performed in the spirit of the Commonwealth Electoral Act.

As someone who has been making submissions to Electoral Redistributions at both Commonwealth and State/Territory levels for over a decade, the sequence of events relating to the 2023 Commonwealth Redistributions of both Victora and Western Australia was cause for serious concern.

After all public submission windows had closed, the Electoral Commissioner published communications for both States on the 23rd of January 2024, stating that the originally published projected enrolment data contained errors and that revised projected enrolment data was now available.

However, there was no opportunity for public submissions based on the revised projected numbers. That is, Section 64 of the Commonwealth Electoral Act was not enacted after the corrected enrolment numbers were published.

Effectively, the redistribution committees for Victoria and Western Australia were judge, jury, and executioner, when it came to determining the now current electoral boundaries for both states.

And for Victoria, at least, they did a lousy job!

Longer submission windows for larger States

This refers to Section 64 of the Commonwealth Electoral Act, where the public provide suggestions on redistributions.

Whilst a 4+ week window is sufficient for the States with <20 Divisions, calculating boundaries for the larger States (New South Wales, Queensland, and Victoria) takes a lot longer and has many possible solutions.

At least one, and ideally two extra weeks should be permitted for submissions for the larger States.

Tracking the progress of projected enrolments for NSW, Vic & WA.

To further emphasise the folly of continuing to use projected enrolments as a basis for determining electoral boundaries, I have taken snapshots of NSW, Vic. & WA divisional enrolments.

The set of columns under the Previous Boundaries section shows the enrolment at the commencement of the previous redistribution, the enrolment at the commencement of the current redistribution and the enrolment growth during the entire period those electoral boundaries were in place.

The columns under the Current (2024) Boundaries section are self-explanatory. The one piece of information not provided is that as of 31/8/25, NSW is 44.11% of the way between the Current date and Projected date. Overall, the state is growing at a slower rate than projected.

What this information also shows is some significant departures from the trend enrolment numbers set during the life of the previous boundaries (2014-2023).

Using Banks as an example; its enrolment growth under the previous boundaries was 5.35% over 3174 days. Yet, under new boundaries, it's projected to grow at 10.74% between 9/8/23 and the projection date of 10/4/28 – a period of 1707 days.

Effectively, double the growth in half the time! How was that calculated?

It's no surprise that it has only grown 13.14% of its projected growth, some 44.11% of the way between the current date and projection time.

There are many other divisions where the trend of the previous 7 years bears no reflection to the projected numbers. The worst examples are Bradfield, Cowper, Cunningham, Hunter, and New England.

Both Bradfield and Hunter have already exceeded the enrolment numbers they weren't supposed to reach until 2028. Cunningham, New England, Parkes, and Warringah have all grown in enrolment when they were projected to decline.

Kingsford Smith has gone backwards in enrolment when it was projected to go forwards.

The fullness of time may tell a different story.

Victoria is 43.93% of the way from the Current to the Projected date as at 31/8/25.

There are a few examples where projected % varies from trend % - the eastern suburbs divisions of Chisholm, Hotham, Kooyong, Macnamara and Menzies are all well under projected growth and far closer to trend.

Gorton has already exceeded its projected enrolment for 2028.

Finally, WA, which was 44.74% of the way between current and projected dates as of 31/8/25.

Overall, WA is growing at a greater rate than projected.

Interesting to note that the three divisions with a presence in regional WA; Bullwinkel, Durack, and O'Connor have all exceeded their projected enrolment numbers for 2028.

The 4th regional Division, Forrest, is very close to its 2028 projection as well.

For Durack, Forrest and O'Connor, the projected growth was significantly less than the trend growth.

At the other end of the scale Perth and Swan are slow to gain new enrolments.

Exactly how those projection numbers have calculated remains a mystery.

Unless these calculations are made transparent, the suspicion that they can be manipulated to deliver an outcome will remain.

This is why trend enrolment is more transparent, and a better method to base new electoral boundaries than projected enrolment.

Part 2: The 2025 Federal Election

Equality of the vote

47,789 electors tuned out in Lingiari to elect a single member to the House; whilst 129,785 electors turned out in Mayo to elect a single member to the House.

Effectively, a vote in Lingiari had as much power as almost 3 votes (2.7) in Mayo.

Clearly, all voters in Australia are NOT EQUAL.

The time has long passed where, regardless of which State or Territory we all live, the value of our votes must be far more equal than they are at present.

And a system that ensures we will all remain equal must be put in place and not subject to the whim of any government of the day.

More on this in Part 3 of this submission.

Also of concern is the low turnouts in some Divisions. Durack, Lingiari, and Solomon all failed to record 80% turnouts.

Kennedy and Leichhardt failed to record 85% turnouts.

As a starting point, I propose that the 5 Divisions with the lowest turnouts have their electoral rolls audited. This would include a reconciliation of data with other Government Departments, including, but not limited to, Medicare, Centrelink, and the ATO.

Early Voting analysis

This was a subject I spent some pages detailing after the 2022 election. To some extent, I don't think the AEC has learnt much in relation to multi-divisional PPVC's in capital cities – especially Sydney.

Key data in tables below:

State	Division	PPVC	Total Votes	Days open	Avg Per Day
NSW	Banks	Haymarket BANKS PPVC	246	9	27.3
NSW	Barton	Haymarket BARTON PPVC	544	9	60.4
NSW	Bennelong	Haymarket BENNELONG PPVC	399	9	44.3
NSW	Berowra	Haymarket BEROWRA PPVC	219	9	24.3
NSW	Blaxland	Haymarket BLAXLAND PPVC	212	9	23.6
NSW	Bradfield	Haymarket BRADFIELD PPVC	362	9	40.2
NSW	Cook	Haymarket COOK PPVC	192	9	21.3
NSW	Fowler	Haymarket FOWLER PPVC	117	9	13.0
NSW	Grayndler	Haymarket GRAYNDLER PPVC	736	9	81.8
NSW	Greenway	Haymarket GREENWAY PPVC	138	9	15.3
NSW	Hughes	Haymarket HUGHES PPVC	161	9	17.9
NSW	Kingsford Smith	Haymarket KINGSFORD SMITH PPVC	569	9	63.2
NSW	Mackellar	Haymarket MACKELLAR PPVC	174	9	19.3
NSW	Mitchell	Haymarket MITCHELL PPVC	237	9	26.3
NSW	Parramatta	Haymarket PARRAMATTA PPVC	239	9	26.6
NSW	Reid	Haymarket REID PPVC	534	9	59.3
NSW	Sydney	Haymarket SYDNEY PPVC	7,899	10	789.9
NSW	Warringah	Haymarket WARRINGAH PPVC	392	9	43.6
NSW	Watson	Haymarket WATSON PPVC	222	9	24.7
NSW	Wentworth	Haymarket WENTWORTH PPVC	962	9	106.9
NSW	Werriwa	Haymarket WERRIWA PPVC	126	9	14.0

The turnout at Haymarket PPVC for all Divisions bar Sydney and Wentworth was awful. A waste of resources.

State	Division	PPVC	Total Votes	Days open	Avg Per Day
NSW	Banks	Ultimo BANKS PPVC	128	9	14.2
NSW	Barton	Ultimo BARTON PPVC	225	9	25.0
NSW	Bennelong	Ultimo BENNELONG PPVC	223	9	24.8
NSW	Berowra	Ultimo BEROWRA PPVC	106	9	11.8
NSW	Blaxland	Ultimo BLAXLAND PPVC	130	9	14.4
NSW	Bradfield	Ultimo BRADFIELD PPVC	167	9	18.6
NSW	Cook	Ultimo COOK PPVC	92	9	10.2
NSW	Fowler	Ultimo FOWLER PPVC	79	9	8.8
NSW	Grayndler	Ultimo GRAYNDLER PPVC	553	9	61.4
NSW	Greenway	Ultimo GREENWAY PPVC	74	9	8.2
NSW	Hughes	Ultimo HUGHES PPVC	90	9	10.0
NSW	Kingsford Smith	Ultimo KINGSFORD SMITH PPVC	240	9	26.7
NSW	Mackellar	Ultimo MACKELLAR PPVC	104	9	11.6
NSW	Mitchell	Ultimo MITCHELL PPVC	90	9	10.0
NSW	Parramatta	Ultimo PARRAMATTA PPVC	131	9	14.6
NSW	Reid	Ultimo REID PPVC	216	9	24.0
NSW	Sydney	Ultimo SYDNEY PPVC	4,947	9	549.7
NSW	Warringah	Ultimo WARRINGAH PPVC	148	9	16.4
NSW	Watson	Ultimo WATSON PPVC	134	9	14.9
NSW	Wentworth	Ultimo WENTWORTH PPVC	212	9	23.6
NSW	Werriwa	Ultimo WERRIWA PPVC	68	9	7.6

Ultimo was worse, if that were possible.

NSW	Banks	Wynyard BANKS PPVC	298	9	33.1
NSW	Barton	Wynyard BARTON PPVC	554	9	61.6
NSW	Bennelong	Wynyard BENNELONG PPVC	773	9	85.9
NSW	Berowra	Wynyard BEROWRA PPVC	351	9	39.0
NSW	Blaxland	Wynyard BLAXLAND PPVC	181	9	20.1
NSW	Bradfield	Wynyard BRADFIELD PPVC	808	9	89.8
NSW	Cook	Wynyard COOK PPVC	273	9	30.3
NSW	Fowler	Wynyard FOWLER PPVC	105	9	11.7
NSW	Grayndler	Wynyard GRAYNDLER PPVC	915	9	101.7
NSW	Greenway	Wynyard GREENWAY PPVC	168	9	18.7
NSW	Hughes	Wynyard HUGHES PPVC	214	9	23.8
NSW	Kingsford Smith	Wynyard KINGSFORD SMITH PPVC	674	9	74.9
NSW	Mackellar	Wynyard MACKELLAR PPVC	350	9	38.9
NSW	Mitchell	Wynyard MITCHELL PPVC	359	9	39.9
NSW	Parramatta	Wynyard PARRAMATTA PPVC	343	9	38.1
NSW	Reid	Wynyard REID PPVC	662	9	73.6
NSW	Sydney	Wynyard SYDNEY PPVC	3,794	9	421.6
NSW	Warringah	Wynyard WARRINGAH PPVC	1,257	9	139.7
NSW	Watson	Wynyard WATSON PPVC	215	9	23.9
NSW	Wentworth	Wynyard WENTWORTH PPVC	1,919	9	213.2
NSW	Werriwa	Wynyard WERRIWA PPVC	106	9	11.8

Finally, Wynyard – the newest of the three, was also the best of the three.

Whilst Haymarket and Ultimo could continue as PPVC's, it would only be for the Divisions of Grayndler, Sydney, and Wentworth.

Combining the results for all 3 meant there was justification for having ONE inner city PPVC for Sydney. Though the Divisions of Fowler, Greenway, & Werriwa still couldn't average 50 voters per day across all 3 PPVC's.

Melbourne wasn't any better despite only having a single inner city PPVC.

State	Division	PPVC	Total Votes	Days open	Avg Per Day
VIC	Calwell	Melbourne CALWELL PPVC	184	9	20.4
VIC	Melbourne	Melbourne CBD PPVC	0	1	0.0

VIC	Scullin	Melbourne SCULLIN PPVC	115	9	12.8
VIC	Wills	Melbourne WILLS PPVC	911	9	101.2

Apart from the Division of Melbourne and the adjoining Divisions of Fraser, Macnamara, Maribyrnong and Wills; providing PPVC access for other metropolitan Divisions is a waste of resources.

The Adelaide PPVC only had limited numbers for outer suburban Divisions and wasn't worth operating for either Barker or Grey.

State	Division	PPVC	Total Votes	Days open	Avg Per Day
SA	Adelaide	Adelaide ADELAIDE PPVC	5,472	10	547.2
SA	Barker	Adelaide BARKER PPVC	168	9	18.7

Of the 28 PPVC's above, 12 were in Victoria; 7 Queensland; 4 New South Wales; 2 each in the ACT & SA and 1 in WA.

Almost without exception, additional PPVC's need to be added in these Divisions.

With Queensland & SA either about to undergo or undergoing Redistributions, boundary changes may affect the placement of additional PPVC's. For all Divisions in order of listing I have some suggestions:

Griffith – A new PPVC somewhere around Morningside

Gellibrand – A new PPVC in Altona

Werriwa – A new PPVC around Prestons

Herbert – Extend Thuringowa Central operating days

Makin – A new PPVC around Golden Grove

Flinders – A new PPVC somewhere around Rye

Capricornia – A second Rockhampton-based PPVC around Norman Gardens

Bowman – A new PPVC in Victoria Point or Redland Bay

Greenway – A new PPVC around Riverstone (shared with Chifley?)

Bonner – A new PPVC around Tingalpa

Gorton – A new PPVC in Fraser Rise

Fadden – A new PPVC around Hope Island or Paradise Point

Fenner – A new PPVC around Ngunnawal

Corio – A new PPVC in Belmont or Highton (shared with Corangamite?)

Jagajaga – A new PPVC in Eltham

Mitchell – A new PPVC in Castle Hill

Bean – A new PPVC in either the Weston Creek or Woden Valley municipality.

Calwell – A new PPVC in Greenvale

Sturt – Extend Athelstone PPVC operating days

Brand – Retain 2 PPVC's in Rockingham. Refer Adjustments section of this submission, below.

Kingsford Smith – A new PPVC around Matraville

Dawson – A new PPVC on the north side of the Pioneer River, Mackay

Bruce – A new PPVC in Endeavour Hills or Hallam

Aston – A new PPVC in Ferntree Gully

Wannon – A second PPVC in Warrnambool

Kooyong – A new PPVC in either Balwyn or Balwyn North

Monash – A new PPVC in either Drouin or Leongatha or both.

Hotham – A new PPVC around Clayton.

Analysis of the Informal Vote – House and Senate.

The next 2 pages detail formal, informal and total votes by Division for both the House and the Senate.

The data is sorted by Number of Candidates contesting the Division and then by House informal percentage.

Some interesting points to note:

- In only 3 Divisions – Maribyrnong, Clark, and Gippsland - is the informal vote percentage for the Senate higher than the informal vote percentage for the House.
- Zero out of 150 Divisions have an equal number of votes for the House as they do for the Senate. Formal and informal combined. How is this possible?
- There are 352,207 more informal votes for the House than the Senate.

Divisions with 4, 5, 6 or 7 HOR candidates

		House				Senate

11	Cowper	107,735	11,864	119,599	9.92%	113,932	5,641	119,573	4.72%	-5.20%
12	McPherson	97,215	8,968	106,183	8.45%	100,879	3,877	104,756	3.70%	-4.74%
13	Calwell	89,831	10,657	100,488	10.61%	94,776	5,394	100,170	5.38%	-5.22%
13	Riverina	105,837	13,443	119,280	11.27%	113,785	5,506	119,291	4.62%	-6.65%

Summary: House informality x number of candidates

	House x Number of Candidates			
No. of Candidates	Formal	Informal	Total	Informal %
4	408,113	10,799	418,912	2.58%
5	893,234	44,384	937,618	4.73%
6	2,751,339	101,250	2,852,589	3.55%
7	3,630,497	176,453	3,806,950	4.64%
8	4,486,997	291,447	4,778,444	6.10%
9	1,643,458	133,758	1,777,216	7.53%
10	1,168,386	105,344	1,273,730	8.27%
11-13	508,212	56,077	564,289	9.94%

Apart from just one outlier, it's obvious that the more candidates that contest a division, the higher the informal vote becomes.

Divisions where the informal vote was greater than 2CP winning margin

Division	2CP Margin	Informal Vote
Banks	4,725	10,998
Bean	700	2,670
Bendigo	2,983	6,228
Berowra	3,778	7,892
Bradfield	26	6,656
Bullwinkel	1,066	3,867
Cowper	5,483	11,864
Forde	3,796	7,440
Forrest	4,447	5,465
Fowler	4,974	15,079
Fremantle	1,400	3,764
Goldstein	175	3,198
Hughes	6,009	9,205
Kooyong	1,532	2,402
Lindsay	5,462	12,020
Longman	269	4,998
McPherson	8,625	8,968
Menzies	2,358	4,523
Petrie	2,730	3,746
Solomon	1,576	2,240
Werriwa	11,870	18,274
Wills	3,137	5,106

In 22 Divisions, the 2CP winning margin of the successful candidate was less than the informal vote.

How many of these results may have been different, had the criteria for what constitutes a formal vote been less stringent?

You can't spin these numbers! The statistics speak for themselves! And it can be fixed.

It is time to change the definition of what constitutes a formal vote for the House.

The Senate ballot paper does not require every box to be numbered – either above or below the line.

The voting process would be far simpler for the people that matter – the electors, themselves – if the requirements for a formal vote on a House ballot paper align with the requirements for voting ATL on the Senate ballot paper.

The selling message to the voters is **"Just Pick 6."** With the **same vote savings provisions** for the House ballot paper as already applies to the Senate ballot paper.

CPV disadvantages People with Disabilities – an election experience recounted

I have been a Disability Support Worker for over 5 years.

This year, one of my clients insisted I accompany him so he could cast his vote at an EVC.

Some of his disabilities include anxiety and short-term memory loss, so when I drove him to the EVC, I was surprised to see a queue of people out the door and perhaps 30 metres long, waiting to cast their vote.

Those handing out HTV leaflets assisted in pointing us in the direction of where those with disabilities were ushered in without having to wait in the queue.

My client found being handed a lot of HTV's was overwhelming, especially as the candidate he wanted to vote for didn't have their HTV available. This was the first morning of early voting on April 22nd.

After having his name checked off, he went to the booth to cast his vote and forgot who he wanted to vote for. I had to remind him. He then had to complete the necessary number of squares on the Senate ballot paper and all squares on the House ballot paper. He found this quite overwhelming and if I hadn't been there to support him, there is no way he would have submitted a formal vote – at least not on the House ballot paper.

On reflection, and given my experience supporting people with disabilities, I believe that expecting many people with disabilities to sequentially number every box on the House ballot paper is just not something that some people with disabilities have the capacity to do.

There are some, and maybe many, who only care for one party or candidate and have no interest in the rest. No-one has the right to deny them the opportunity to express that view at the ballot box!

Yet the current system forces them to choose, when, in reality, they may not have the cognitive capacity to understand what each party stands for. Nor are they interested.

In my experience, **CPV disadvantages people with disabilities**.

Adopting a "Just pick 6" with vote savings provisions for the House ballot paper will not only reduce the informal vote, but allow more people with disabilities to have their voices heard.

My pre-poll experience

At the 2025 Federal Election, I was involved for about 4 days during pre-poll handing out HTV material and talking with voters.

Many people, weren't interested in taking HTV leaflets – from any party. They had the information on their phone and that's what they were going to use.

Discussion between those of us handing out HTV leaflets for many parties, including candidates in my electorate – both successful and unsuccessful - was that HTV material was becoming obsolete. Almost everyone had a phone with the capability of providing the voter the information they needed.

On Friday, the 2nd of May I attended the Warragul EVC to cast my vote. I was both surprised and impressed about a couple of innovations in relation to the voting process.

The first was online checking of enrolment details. I understand that once my details have been checked off, that this blocks them from being used again. A massive step in the right direction!

The second was the printing of HOR ballot papers at enrolment check-off.

I don't know to what extent both these functionalities are available nationally, but the more places this functionality is available, the more accurate the vote count has the potential be.

Adjustments to the count

The accompanying spreadsheet "Adjustment Changes" details all the initial and final counts for all polling places used on election day (Polling Place Type 1) and PPVC's (Poling Place Type 5). In addition, these adjustment changes are broken down by party for each type.

The first thing that becomes apparent is the number of adjustments that are made between the initial count data and the final count data.

What I find most disturbing are the number of adjustments to the actual vote counts – both up and down, and the size of some of those adjustments.

Exactly how votes that are counted on election night can be removed from the final count is something I would like the AEC to explain.

The AEC talks of the count being "Right, not rushed."

However, if vote counts for polling places are being adjusted both up and down – even for something as simple as an initial data entry error - then there are obviously some parts of the counting process that deserve to take more time to ensure an accurate initial count.

Some of the more noteworthy adjustments that show on the report are:

- Clyde North (La Trobe) – initial count 2143 votes; final count 353 votes. A reduction of 1790 votes.
- Jamisontown (Lindsay) – initial count 1331 votes; final count 2922 votes, an increase of 1591 votes which is offset by Kingswood (Lindsay) initial count 1572 votes; final count zero votes.
- Rockingham Central PPVC & Rockingham PPVC (Brand) – initial count of both PPVC's combined of 18,757 votes; final count Rockingham Central PPVC only 18,604 votes.
- West Wodonga PPVC & Wodonga PPVC (Indi) – initial count of both PPVC's combined of 19,952 votes; final count of both PPVC's combined 19,961 votes but 8,103 more votes at West Wodonga PPVC than initial count and 8,094 votes less at Wodonga PPVC.

Clearly, there is potential to make some procedural, security, identity, and numerical improvements to the system.

These changes, in conjunction with the adoption of the Just Pick 6 with vote savings provisions, proposed above, should make more accurate information available with a higher level of certainty of accuracy in a timelier manner.

Suggested changes and improvements to the voting and counting processes

1. The activity of people handing out HTV leaflets, both at pre-poll and on election day has pretty much reached its "Use By" date and can be scaled back. This is an unnecessary cost and waste of paper which is borne by the candidates and political parties. With extended lead times for candidate nominations and ballot draws, HTV information could be printed on Corflutes. Voters could simply take a picture of the corflute of the party they want to vote for and follow that if they chose to do so. If HTV leaflets are to remain, then they remain only in limited quantities and are only issued on request from a voter, not randomly thrust into voters' hands.
2. Voters should supply proof of identity when their name is checked off. Preferably photo ID such as a driver's license or other government issued photo ID such as a Working with Children's Check. Other forms of acceptable ID may include a Medicare Card or Pension Card. (If this information is not linked to the Electoral Roll data, that is something that should be undertaken in conjunction with Medicare and Centrelink before the next election)
3. The HOR Ballot Paper which is printed off should also contain the name of the Polling Place at which it has been printed. In my case it would have been labelled: "Warragul MONASH PPVC." It should also include a sequence number for reconciliation purposes, with a reprint capacity in the event a voter requests another ballot paper. For EVC's, the date on which the ballot paper is printed should also be included – again, for reconciliation purposes. These additions would ensure that at later stages during rechecks or DoP, the vote can be traced back to its source, and would assist in reconciling the number of votes printed versus counted.
4. Early Voting: **Votes at early voting centres should be counted at the close of voting each night.** Scrutineers must be available to oversee the count. Furthermore, the votes should be separated so that the votes for each Division (serviced within a multi-divisional EVC) are recorded separately, and absentee votes counted as a single entry. At the conclusion of counting each evening, the following information should be determined:

a. First preferences by Candidate (for each Division serviced by the PPVC)
b. Informal Votes (for each Division serviced by the PPVC)
c. Total Votes (for each Division serviced by the PPVC)
d. Absentee Votes (as a single count)

The count data should be entered into the AEC system on a nightly basis, but not published. Ballot boxes should be secured, labelled, and stored on site protected by security guards and security cameras. (Easier to co-ordinate if election day is a fixed day – refer next section)

The ultimate benefit of the above occurring, is that as soon as polls close on election night, all the PPVC data is already in the system and can be made available to the public. Though it would be wise to wait until WA polls close at 8PM EST before publishing any/all PPVC data.

5. Relax scrutineer conditions. The basis for this proposal is that the election belongs to the people, not the political parties and not the AEC. The people need to have full transparency and confidence in the process. I propose that anyone can be a scrutineer. They would, however, need to register with the AEC as a registered scrutineer – this would require new functionality added AEC website, and would **not** incur a fee from the applicant. In addition, they should meet the following criteria:
    a. Be an enrolled voter.
    b. If member of a political party, provide details including which party, membership number, and expiry date.
    c. Hold either a valid Working with Children Check or current (within the past 2 years) Police Check. (Provide evidence thereof.)
    d. Not have any neurological or psychological condition which may trigger violent or abusive actions.
    e. Have no convictions (previous 15 years) for violence or abuse
    f. Not be either a current or previous (15 years) member of any organisation or group which has been convicted of violence offences
6. Election Day Polling Places: Scrutineers all sign off on First Preference by Candidate, Informal Votes, Total Votes, and Absentee Votes. They receive a signed copy of the summary. This is the baseline for that polling place and cannot be amended at any stage during any subsequent recounting or checking stages, unless any amendments are signed off by the same scrutineers who signed off the original count data.
7. Engagement of companies involved in auditing or accounting to oversee/verify count data should be encouraged, especially in places where scrutineers are lacking. This would further strengthen the public's confidence in the integrity and accuracy of the count.
8. AEC should **not** do indicative 2CP or 2PP counts – **at all!** It gives voters a misleading impression that the outcome of an election can only be a Labor or Coalition government.

Progress of the House count:

Whilst the AEC prides itself on a "Right, not rushed" principle; there are obviously factors which slow the whole process down.

Why does it take weeks for the Australian result to be declared, when other countries can declare their election results within hours?

Great Britain, for example, has a population almost 2½ times that of Australia; some 650 Electoral Constituencies – or more than 4 times that of Australia, yet at its last general election in 2024, it still had its results declared on Election night - or at least early the next morning.

Meanwhile, at our May 3 Federal Election, final results for the House of Representatives weren't published until the 16th of June – some **SIX WEEKS** after polling day.

Whilst some allowances must be made for CPV as opposed to First-Past-the-Post and non-compulsory voting, the fact that final results for all Divisions were not determined for such a long period of time means there must be something wrong with the current system. It may be resources, it may be the current process, it may be technology, or a combination of all three.

Using the UK example, it may be that a greater number of constituencies (Divisions) and less votes to count per constituency (Division) may also be a contributing factor.

Perhaps we should be looking to reverse the trend of fewer polling places processing more votes and instead revert to more polling places processing fewer votes.

Also, if votes are being counted in central locations, that cameras are set up so people can view the count via social media or the AEC website.

Who is looking over the shoulder of these AEC officials when they do their checks, rechecks and adjustments?

Is there any independent (non-AEC) scrutiny of the counting of Postal, Absent, Provisional or Declaration Pre-poll votes?

Is there any independent (non-AEC) scrutiny of adjustments to the count after the initial count has concluded right up until final numbers are published?

All counting of votes from **all other sources**, including Special Hospital, Remote Mobile, Other Mobile, Postal, Provisional, Absentee, should be scrutinised by at least two scrutineers.

Ultimately, the results presented by the AEC need to be audited by private businesses, specialising in auditing and with no connections to the either the AEC or any major political party.

Senate Count.

When ATL voting was first introduced in 1984, voters were told that a 1 in the box ATL was the equivalent of 1,2,3 etc. BTL for that group of candidates.

This was confirmed by the High Court in 2016 (Day v. the Australian Electoral Office).

See also https://www.youtube.com/watch?v=KuWkMfz5q88 by Professor Anne Twomey from 16:20

Why, therefore, when the first candidate of a group with enough ATL votes for more than one quota is elected, is their surplus distributed to other candidates and groups or lost by fraction?

Shouldn't all the surplus votes flow to the next candidate in that group?

Below is almost a cut and paste from my 2022 JSCEM submission with 2025 updates. It remains just as relevant today as it was 3 years ago…

I propose further refinements to how Senate Ballot Papers are processed and counted.

There are two objectives to these proposed refinements:

1. To retain the maximum number of votes as deep into the DoP process as possible by avoiding the Surplus Distributions at the beginning of the DoP.
2. To empower the people, not the parties, to choose the sequence of election of candidates within a Senate Group.

How this works:

Once all first preference votes have been counted, the BTL votes for each candidate in each group are assessed and the sequence of candidates re-sorted (where applicable) by the number of BTL votes each candidate in the group received.

I will use the 2025 Senate result for NSW to explain how these proposals would alter the existing process.

For the ALP – Group A – Emilija Beljic (candidate 3) received more BTL first preference votes than Tim Ayres (candidate 2); 4141 to 3991. These candidates would swap positions, as would candidates 5 & 6, Heather Roarty and Sharon Sewell.

Group	Candidates	Party	Votes	%	Quotas
A	Above-the-line Votes	Labor	1,809,794	36.29	2.5404
	SHELDON, Tony	**Labor**	**49,972**	**1.00**	**0.0701**
	AYRES, Tim	**Labor**	**3,991**	**0.08**	**0.0056**
	BELJIC, Emilija	Labor	4,141	0.08	0.0058
	MCGREGOR, Victoria	Labor	3,330	0.07	0.0047
	SEWELL, Sharon	Labor	2,358	0.05	0.0033
	ROARTY, Heather	Labor	3,127	0.06	0.0044
	Group Total	Labor	1,876,713	37.63	2.6343

The sequence for Group A would now appear thus:

Re-sequence by first preference BTL			
Group A - Labor			
Candidate	Movement	Votes	Status
ATL		1,809,794	
SHELDON, Tony		49,972	
BELJIC, Emilija		4,141	
AYRES, Tim		3,991	
MCGREGOR, Victoria		3,330	
ROARTY, Heather		3,127	
SEWELL, Sharon		2,358	
Group Total		1,876,713	

Positional exchanges would also have occurred for Groups I - Libertarian / HEART / Gerard Rennick People First; J - Legalise Cannabis Party; N - Liberal & Nationals and R - The Greens

As Group A received the greatest number of ATL votes of any group, and more than one quota of ATL votes; their candidate with the greatest number of BTL votes, Tony Sheldon, should be elected first.

He retains all his 49,972 BTL votes, so needs only 662,433 ATL votes from the pool to achieve his quota. The remaining 1,147,361 votes in the ATL pool are reserved for the remaining candidates.

Count 1 - Highest ATL count over quota elects first candidate			
Group A - Labor			
Candidate	Movement	Votes	Status
ATL	-662,433	1,147,361	
SHELDON, Tony	662,433	712,405	Elected
BELJIC, Emilija		4,141	
AYRES, Tim		3,991	
MCGREGOR, Victoria		3,330	
ROARTY, Heather		3,127	
SEWELL, Sharon		2,358	
Group Total		1,876,713	

The group with the next highest number of ATL votes over a quota is Group N - Liberal & Nationals. Count 2 would see their highest BTL vote recipient, Andrew Bragg, take from the ATL pool only the number of votes he needs to be elected.

Group N - Liberal & Nationals			
Candidate	Movement	Votes	Status
ATL	-683,941	744,260	
BRAGG, Andrew	683,941	712,405	Elected
HUGHES, Hollie		3,331	
COLLINS, Jessica		3,256	
DAVEY, Perin		2,038	
McARTHUR, Juliana		1,405	
BRINSMEAD, Rhiannon		1,245	
Group Total		1,467,940	

Count 3 elects the second Labor candidate which is now Emilija Beljic and count 4 elects the second Liberal candidate which is now Hollie Hughes.

There are now no groups with sufficient ATL votes to achieve a quota based purely on ATL votes, or by adding the number of ATL votes to the count of the lead/next candidate.

At this point, the remaining ATL votes for each group pass to their lead/next candidate. In this example, this step is performed as Count 5.

Below is how all the NSW Senate Groups which would have had their candidates re-sorted, would look.

Count 5 - Remaining ATL votes allocated to next candidate

Group A - Labor			
Candidate	Movement	Votes	Status
ATL	-439,097	0	
SHELDON, Tony		712,405	Elected
BELJIC, Emilija		712,405	Elected
AYRES, Tim	439,097	443,088	
MCGREGOR, Victoria		3,330	
ROARTY, Heather		3,127

The logic in not distributing any surplus to other groups at this point in the count, is that **all the ATL votes have a 1 in the Group box. Therefore, they need to remain with that group until such time as the candidate** that received the balance of ATL votes, but not enough for a quota, **is eliminated from the count.** Then, and only then, are they to be distributed to other candidates as appropriate.

The count now continues as normal with the candidate with the least number of first preference votes eliminated from the count and their preferences being distributed.

Part 3: 2028 and beyond

Time to consider fixed 3-year terms?

Notwithstanding Constitutional or Parliamentary procedures, rules, and regulations; including but not limited to:

- Double Dissolutions
- Votes of No Confidence, or
- Dismissal of the government

I believe the Commonwealth Parliament should adopt as an ideal, fixed parliamentary terms. Most States and both Territories already have fixed 4-year terms in place.

Furthermore, I suggest that election day should be the 3rd Saturday in May.

From an economic perspective, it would give businesses and the people more certainty. They know when the election is going to be held and can plan around it.

The other major beneficiary of a fixed election date would be the AEC.

As the number of voters continues to increase, the preparation of materials, organisation of voting venues and co-ordination of human resources, just to name three, would be something that could be managed with greater certainty if the election date is known months in advance instead of just a few weeks in advance.

I have suggested the 3rd Saturday in May because:

- April holidays like Easter and ANZAC Day do not infringe with the 2-week early voting window.
- It doesn't occur on the same weekend as Mother's Day.
- It allows counting to be concluded and results declared for the new Senate taking effect with minimal lag between the finalisation of results and the 1st of July.

Furthermore, **Election Day** should be gazetted as a **Special Public Holiday**. This will mean less people have work commitments on the Saturday, potentially meaning more people can assist with the administration of the election.

People who turn 18 up to and including election day can vote from day 1 of pre-poll.

Let me preface this section by stating that I don't know the capabilities of the enrolment system or database. This is written from someone who spent over 20 years in the ITC industry and holds internationally recognised certifications in IT Service Management.

Using the 2025 election as an example, there was a 26-day gap between close of rolls on the 7th of April and election day on the 3rd of May.

A number of people who would have been eligible voters turned 18 between those two dates. Every effort should be made to ensure that all people in this situation are enrolled by close of rolls.

Having fixed election dates would make this easier, and the AEC could undertake an enrolment campaign from the beginning of election year to the close of rolls.

The enrolment database should be set in such a way that it views its data as at election day for the entire pre-poll window.

That is, if a person walks into an EVC on day 1 of pre-poll, even if they don't turn 18 until Election Day, the system will still allow them to vote, as they are voting as if it is already Election Day.

Independent observers for mobile polling

Anecdotal evidence suggests that some voters who vote at mobile polling places may be influenced to vote for a candidate or party who is not their first preference. By whom, or how this influence is exerted, is immaterial. That such influence is said to exist is the problem.

I believe that in places where such influence is claimed to have been exerted, that efforts should be made to ensure independent observers accompany election officials to these locations to ensure any attempts to influence voters are identified and addressed.

Military personnel would be my first choice of independent observers to accompany AEC Mobile and Special Hospital staff to ensure all voters are excluded from any methods which may attempt to influence their vote. Australian Federal Police or even local law enforcement could be possible alternatives.

Physical altercations at EVC's

Social media and even legacy media showed footage of physical altercations at EVC's during the 2025 election.

Whilst voting is compulsory, it shouldn't mean that people are subjected to abuse – either verbal or physical – whilst queueing up to vote.

However, the reality is, that many people, with both diagnosed and undiagnosed mental health issues, as well as under the influence of drugs – both legal and illegal – will turn up to polling places to cast their vote.

Having personally witnessed harsh words being exchanged between voters and people (including candidates) handing out HTV cards during pre-poll, I conclude that a small minority of people can be easily triggered and there's no way of predicting such a response from any voter.

A system needs to be in place where local law enforcement is either on site or on call should such situations be encountered.

Proportional representation in the House

Let me preface this section by stating that I don't know whether this proposal is Constitutional.

Under the current electoral system, it is mathematically possible for one party to win 100% of seats in the House with just 50%+1 of the 2CP vote.

And again, using the 2025 results as an example:

- Labor won 94 (62.67%) of seats with 34.56% of the primary vote.
- The Liberal – National Coalition in all its guises won 43 (28.67%) of seats with 31.82% of the primary vote.
- The Greens won 1 (0.67%) seat with 12.2% of the primary vote
- One Nation won zero seats with 6.4% of the primary vote

In proportion to their primary vote Labor should have won 52 seats, the Coalition 48, The Greens 18, and One Nation 10.

The current electoral system does not deliver results that reflect the will of the people.

I propose a system, similar to what is already in place in New Zealand. That is, that in each State and Territory, every party is entitled to the number of representatives which is in line with their primary vote.

Such a process could only be applicable to registered political parties and not independents, as independent policies range from candidate to candidate.

How it works:

A number of statistics are required:

- Formal votes by State/Territory
- First preference votes by party by State/Territory
- Number of seats won by party by State/Territory
- First preference votes by candidate

Australia Capital Territory

The table below shows how this works in practice.

Each party's first preference vote within the State/Territory is displayed. Their vote share, and the number of seats already won.

The 'Entitled Seats' column is a product of multiplying the share of the primary vote by the number of seats to which each State/Territory is entitled. In the ACT's case, that number is 3.

Where the number of entitled seats (rounded to the nearest whole number at 4 decimal places) is greater than the number of seats won, the relevant party is entitled to the number of proportional members in the shortfall column.

ACT					
Party	**Formal Vote**	**Share**	**Seats won**	**Entitled Seats**	**Shortfall**
ALP	138,110	47.53%	3	1.4259	
Liberal	61,489	21.16%	0	0.6349	1
Greens	43,753	15.06%	0	0.4517	
Independent	37,307	12.84%	0	0.3852	
Family First	7,426	2.56%	0	0.0767	
Other	2,480	0.85%	0	0.0256	N/A
	290,565		3		1

So, who is appointed?

We now go to the First Preferences by Candidate information for the Liberal Party in the ACT and see which candidate had the highest number of first preference votes and wasn't elected.

The Liberal candidate for Bean, David Lamerton, received 23,665 votes, more than any other Liberal candidate, so would be appointed as an additional representative for the ACT.

New South Wales

NSW					
Party	**Formal Vote**	**Share**	**Seats won**	**Entitled Seats**	**Shortfall**
ALP	1,686,994	35.20%	28	16.1898

	4,793,251		46		16

NSW is entitled to 46 seats so is a lot more complex than the ACT. For NSW, an additional 16 candidates are appointed as per the table above. They are in order of appointment by party -

Liberal: Gisele Kapterian (Bradfield) 42,676 votes; Ro Knox (Wentworth) 40,155 votes; James Brown (Mackellar) 39,647 votes; David Coleman (Banks) 38,683 votes, and Scott Yung (Bennelong) 38,510 votes.

Greens: Hannah Thomas (Grayndler) 27,847 votes; Mandy Nolan (Richmond) 27,783 votes; Charlotte McCabe (Newcastle) 24,061 votes; Jess Whittaker (Cunningham) 23,584 votes and Luc Velez (Sydney) 23,162 votes

One Nation: Stuart Bonds (Hunter) 18,011 votes; Mark Carter (Parkes) 14,320 votes and Brent Larkham (New England) 11,387 votes

Trumpet of Patriots: Suellen Wrightson (Hunter) 4,068 votes

Family First: Jamie Green (Chifley) 5,336 votes

Libertarian: Mark Hornshaw (Lyne) 4,165 votes

Northern Territory

NT					
Party	**Formal Vote**	**Share**	**Seats won**	**Entitled Seats**	**Shortfall**

	3,149,641		30		8

Just eight candidates would be appointed for Queensland as both major parties elected greater than their share of the primary vote.

This is also the first of two states where the independent vote is greater than the number of seats won.

Those appointed in Queensland would have been -

The Greens: Max Chandler-Mather (Griffith) 34,570 votes; Stephen Bates (Brisbane) 28,663 votes and Remah Naji (Moreton) 20,332 votes

One Nation: Natalie Davis (Wright) 18,998 votes and Cheryl Kempton (Capricornia) 15,355 votes

Trumpet of Patriots: Stephen Andrew (Capricornia) 5,999 votes

Family First: Corneliu Pop (Forde) 5,459 votes

Gerard Rennick People First: Lance Price (Flynn) 6,180 votes

South Australia

South Australia

Whilst not perfect, it's a far fairer reflection on how the people voted than the current parliament.

An additional Determination – for Senators.

In this section, the term 'numerical entitlement' refers to the number of divisions each State or Territory is entitled to, as per the existing Determination process – as described in Sections 45-48 of the Commonwealth Electoral Act.

The term 'Constitutional entitlement' refers to Section 24 of the Constitution, which guarantees every 'Original State' a minimum of 5 members of the House of Representatives.

The objective of this new Senate Determination is to ensure that an Original State's Constitutional entitlement **is not greater** than its numerical entitlement. And whenever such a divergence occurs, to adjust the representation of the Senate until that divergence is resolved. That adjustment will ultimately flow through to House representation as well.

Effectively, this proposal would be inserted into the Commonwealth Electoral Act as a precursor to the existing Section 40, and would need to be referred to in Section 48 as any change to the number of Senators will affect the number of members of the House.

How this would have worked had it applied in 2025:

During the first week of the new Parliament, a new process, the Senate Determination Process, is enacted.

This is identical to the existing Determination process (IE Sections 46 & 47 of the Commonwealth Electoral Act) – with adjusted timings.

The Australian Statistician would take the most recent estimates of population, published by the ABS around the 3rd week of June.

At the beginning of the current Parliament, this would have been the information presented:

Population of 6 States:	26,651,151			
2 x State Senators:	144			
Quota:	185077.4375			
	Population	**Entitlement Quota**	**# Seats**	**Entitled Seats**
NSW	8,545,140	185077.4375	46.1706	46
Vic	7,011,123	185077.4375	37.8821	38
Qld	5,618,765	185077.4375	30.3590	30
SA	1,891,670	185077.4375	10.2210	10
WA	3,008,697	185077.4375	16.2564	16
Tas	575,756	185077.4375	3.1109	5
NT, Cocos and Christmas Islands	264,683	185077.4375	1.4301	2
ACT, Jervis Bay, Norfolk Island	484,179	185077.4375	2.6161	3

Tasmania's numerical entitlement is less than its Constitutional entitlement.

When, and only when, this occurs, the process begins to bring both numbers into alignment.

This is achieved by increasing the number of Senators from each State by 2, and performing the calculation again:

Population of 6 States:	26,651,151			
2 x State Senators:	168			
Quota:	158637.8036			
	Population	**Entitlement Quota**	**# Seats**	**Entitled Seats**
NSW	8,545,140	158637.8036	53.8657	54
Vic	7,011,123	158637.8036	44.1958	44
Qld	5,618,765	158637.8036	35.4188	35
SA	1,891,670	158637.8036	11.9245	12
WA	3,008,697	158637.8036	18.9658	19
Tas	575,756	158637.8036	3.6294	5
NT, Cocos and Christmas Islands	264,683	158637.8036	1.6685	2
ACT, Jervis Bay, Norfolk Island	484,179	158637.8036	3.0521	3

Even with the number of Senators from the States increasing from 12 to 14, Tasmania's numerical entitlement still falls below its Constitutional Entitlement.

At 16 Senators from the States, there is still a discrepancy.

Population of 6 States:	26,651,151			
2 x State Senators:	192			
Quota:	138808.0781			
	Population	**Entitlement Quota**	**# Seats**	**Entitled Seats**
NSW	8,545,140	138808.0781	61.5608	62
Vic	7,011,123	138808.0781	50.5095	51
Qld	5,618,765	138808.0781	40.4787	40
SA	1,891,670	138808.0781	13.6280	14
WA	3,008,697	138808.0781	21.6752	22
Tas	575,756	138808.0781	4.1479	5
NT, Cocos and Christmas Islands	264,683	138808.0781	1.9068	2
ACT, Jervis Bay, Norfolk Island	484,179	138808.0781	3.4881	3

The process is repeated until such time as both numbers align. This occurs at 18 Senators from the States.

Population of 6 States:	26,651,151			
2 x State Senators:	216			
Quota:	123384.9583			
	Population	**Entitlement Quota**	**# Seats**	**Entitled Seats**
NSW	8,545,140	123384.9583	69.2559	69
Vic	7,011,123	123384.9583	56.8232	57
Qld	5,618,765	123384.9583	45.5385	46
SA	1,891,670	123384.9583	15.3314	15
WA	3,008,697	123384.9583	24.3846	24
Tas	575,756	123384.9583	4.6663	5
NT, Cocos and Christmas Islands	264,683	123384.9583	2.1452	2
ACT, Jervis Bay, Norfolk Island	484,179	123384.9583	3.9241	4

What happens now?

This triggers an expansion of both the House and the Senate at the next Federal Election.

(Any existing processes or legislation which limits the execution of, or conflicts with, this new process would either need to be repealed or over-ridden by this amendment to the Commonwealth Electoral Act)

Each State would elect 12 Senators at the next election – nine for six years and three for three years. Not less than nine State Senators would be elected at every half Senate election thereafter. More on this later.

It also triggers House Redistributions for all five mainland States and the ACT to increase their representation.

Currently, any changes to the number of members of the House are triggered by the existing Determination, but that doesn't occur for another 12 months under this timeline, leaving the AEC with around 18 months to complete six Redistributions assuming the parliament runs the full 3 years.

An unworkable situation.

Therefore, this process would kick off two Redistributions immediately. They are chosen by their new entitlement, with those closest to a whole number being selected first.

In the case above, the ACT with 3.9241 quotas is the first Redistribution kicked off, with Victoria second on 56.8232 quotas. The ACT will be redrawn to elect 4 members at the next election. Victoria will be redrawn to elect 57 members at the next election.

The remainder of States wait until the existing Determination 12 months later.

As noted earlier, this will also mean each State elects 12 Senators at the next election. Whilst the simplest logic to determine which Senators are elected for 6 years and which Senators serve only a 3-year term would be the sequence in which they are elected, I don't believe it's the fairest.

The quota for electing 9 Senators is different from the quota for electing 12 Senators.

After much consideration on how this process should work, I believe the best and fairest way to determine which Senators serve 6-year terms and which Senators serve only 3-year terms is to run the Senate Count numbers for each State through the DoP process twice.

The first run elects 9 Senators for 6-year terms using the quota of one-tenth plus one. The second run elects 12 Senators, using a quota of one-thirteenth plus one, and the 3 Senators elected during the second run, that aren't elected in the first run serve 3-year terms.

There is a possibility that the sequence of election may change for the second process. However, the 9 Senators elected in the first run are set.

Final thoughts on this process

It is important to remember that the Senate Determination process, even though performed at the commencement of each new Parliament, will rarely lead to an expansion of both Houses of Parliament. The only reason its first run will be so impactful is because of the massive discrepancy in the number of electors for each Division in the mainland States and the ACT from those in Tasmania and the Northern Territory.

This is about equalising the voices of all Australian voters and ensuring they remain equal. Something I emphasised at the beginning of Part 2.

Such an automated process would also be beyond the whim of the government of the day.

If adopted, this proposal could be added to the Commonwealth Electoral Act with a future date effective, meaning it wouldn't commence during the life of the current Parliament, but could commence after the next Federal Election, due in 2028. IE The Date Effective could be the 1st of July 2028.

Number of Senators for the Territories

There has been some discussion about the number of Senators which the ACT and NT can elect.

I believe there is merit in considering the possibility of each Territory electing the same number of Senators as it elects Members to the House.

The only caveat I would put on that, is that the number of Senators each Territory can elect does not exceed the number of Senators elected by an Original State at a half-Senate election.

Sections 44 - 46 of the Constitution must be applied without fear or favour

Section 44 (i) of the Constitution is clear in relation to allegiance, obedience, or adherence to a foreign power.

Any such infringement is not up for debate or a vote.

Section 44 (i) of the Constitution is to be enacted, and the person who violates Section 44 is no longer a senator or member of the House.

Any senator or member who defies Sections 44-46 of the Constitution and continues to enter the parliamentary grounds with the intention of carrying on as if they were still a member or senator, is to be detained by Australian Federal Police and remain incarcerated during every sitting day until their tenure is certified as invalid. They should also be excluded for life from ever being a candidate again!

Other thoughts

Election DAY – not election fortnight

Despite an overwhelming trend for more and more people to vote early, I believe that there is a risk in doing so. Events can, and do, occur during the final fortnight of a campaign which may sway people's votes. And with hundreds of thousands of pre-poll votes being cast daily, those events could change the winner of a Division or even the entire election.

Limitations on Postal Voting

With evidence of electoral fraud being committed in the United States using mail-in ballots, I believe the time has come to also put limitations on postal voting.

Whilst not wanting to disadvantage those who are genuinely inconvenienced by attending a polling place, postal voting shouldn't be seen as the alternative to standing in a queue if you're capable of doing so.

There has been a decline in the traditional 'democracy sausage' and the exchange of thoughts and ideas between people at polling places over recent years. That decline needs to reverse.

Delivered as a part of a suite of changes, reducing the requirements of those who can apply for a postal vote, will – I believe - improve social cohesion and the exchange of ideas.

Additions / alterations for the existing eligibility requirements are as follows:

1. Live at least 30 kilometres (radius) from the nearest polling place – this replaces the existing 8 kilometres.
2. Live in a household where no-one has a driver's licence and/or owns a car, and the residence is at least 1 kilometre from the nearest public transport route, stop or station.
3. Have attained the age of 67 (retirement age)
4. Have a physical disability or impairment, affecting their mobility, or ability to stand in a queue for a time period of >1 hour.
5. Have a diagnosed neurological/psychological condition that affects their ability to deal with large numbers of people or wait in line for a time period of >1 hour. This would include but not be limited to social anxiety, easily frustrated/annoyed or anger management issues. (points 4 & 5 replace the existing Person with a Disability requirement.)
6. Drop the outside enrolled electorate requirement. People can vote absentee instead.

The perfect election timetable

Whist I have suggested many changes to the existing processes, what I believe would be the perfect election timetable is different again to what I have proposed above.

With a fixed election date, there is no need for an election announcement by the Prime Minister.

The first step in the process then becomes the Issue of writ. This would occur on election day -33.

The close of rolls is election day -26. All voters who are not yet 18, but will turn 18 no later than election day are to be included on the electoral rolls by this date

Close of candidate bulk nominations is election day -24

Close of candidate nominations is election day -22

Declaration of candidates and ballot draw is election day -19. This gives candidates a 1-week window to print of corflutes with HTV information on the corflutes. For those not using corflutes, they can get HTV leaflets printed in that 7-day window.

Remote Mobile, Other Mobile & Special Hospital polling commences on election day -12

Early voting commences on election day -5 (Yes, just one week of early voting)

Election Day then becomes the first Saturday in May and a gazetted special public holiday.

That’s my ideal. I don’t expect the JSCEM to adopt to it.

Summary of most proposals

Proposal 1 – Changes to how Redistributions are performed

Amendments to Part IV of the Commonwealth Electoral Act. This includes changes to tolerances at (what is currently known as) projection time from +/-3.5% to +/-5%. This includes but is not limited to, replacing '96.5%' with '95%' and '103.5%' with '105%' in Sections 66 & 73 of the Commonwealth Electoral Act.

The AEC to produce and publish an additional document 'Enrolment by Division at SA1 level' at least quarterly. This is to be used as input at Redistributions to calculate trend enrolment numbers at (what is currently known as) projection time.

Enrolment projections are to be replaced with a "Capped Trend" calculation.

Replace the word "projection" with the words "target enrolment" in Sections 63A, 66 & 73 of the Commonwealth Electoral Act.

Amend Section 64 of the Commonwealth Electoral Act to allow extra time for submissions for redistributions performed in New South Wales, Queensland, and Victoria.

Ideally States with between 20-40 Divisions add one extra week, States with >40 Divisions add two extra weeks.

In Section 64(a); '5th' Friday would become '6th' or '7th'.

In Section 64(b); '7th' Friday would become '8th' or '9th'.

Proposal 2 – Audit electoral rolls for five (5) lowest turnout electorates

At the resumption of parliament after each federal election, the AEC is to undertake an audit of the electoral rolls of the 5 Divisions with the lowest (<90%) turnout. If less than 5 Divisions have a turnout of under 90%, then only the Divisions with a turnout of under 90% are audited.

Proposal 3 – Improvements to early voting

The AEC needs to undertake a review of the early voting process. This would include location and scope of multi-divisional PPVC's and how effectively the AEC's resources were used. Included in the review would be the appropriateness of multi-divisional PPVC's especially in the capital cities, analysis of where resources were under-utilised and where additional resources could be deployed.

Proposal 4 – Re-defining what constitutes a formal vote for the HOR

I propose that the Commonwealth Electoral Act (1918) is amended to re-define what constitutes a formal HOR vote. I propose that what constitutes a formal vote for the House aligns with what constitutes a formal ATL Senate Vote with the same vote savings provisions.

Proposal 5 – Adopt the 8 bullet points listed under "Suggested changes and improvements to the voting and counting processes" above

These include:

- Reduce amount of election material (HTV cards/leaflets) at polling places. Ideally have HTV information printed on Corflutes with limited HTV cards/leaflets for older voters or as requested by a voter.
- Voter to provide proof of identity when name checked off. Include Medicare, Pension Card, and Driver License details on voter roll information.
- Add more information to printed House ballot paper such as polling place name, date (for PPVC's), and sequence number as per bullet point 3.
- PPVC's: Ballot papers counted nightly after close of voting for the day. Scrutineers receive copy of count data as per bullet point 4.
- Broaden the definition of a scrutineer as per bullet point 5.
- The same process that I propose to apply to PPVC's is also applied to Election Day polling places.
- Verification of count data by organisations with no ties to political parties or government.
- AEC will provide only 'first preferences by candidate' information on election night.

Proposal 6 – Counting of all votes must be scrutinised by registered scrutineers

All vote types must be counted in the presence of at least two scrutineers - preferably from opposite sides of the political spectrum. This includes, but is not limited to; Special Hospital, Remote Mobile, Other Mobile, Postal, Provisional, and Absentee votes.

As per proposal 5, scrutineers receive a signed copy of the count information. This is the baseline for that group of votes and cannot be amended without the sign-off from all the original scrutineers.

Proposal 7 – Changes to the sequence of election of Senators in a Group

I propose that the Commonwealth Electoral Act (1918) is amended, so that the sequence of election of Senators aligns with those who received the highest number of BTL votes, rather than their position on the Party Ticket. In addition, that all ATL votes remain with the Group until such time as the candidate allocated the balance of ATL votes is eliminated from the count during the DoP.

Proposal 8 – Changes to the number of Senators elected by Territories

I see no reason why a Territory cannot elect the identical number of Senators as it already elects Members to the House. Currently the NT elects 2 Members to the House and the ACT elects 3 Members to the House. They should elect an identical number of Senators to the Senate.

Proposal 9 – Fixed term elections.

I propose that the Parliament adopt an ideal of ensuring every parliament runs its full term and that Election Day is the 3rd Saturday in May, every 3rd year.

Election Day is gazetted as a special Public Holiday.

Proposal 10 – Handling of people who turn 18 between close of rolls and election day.

The AEC undertakes to ensure that all eligible voters who turn 18 between the close of rolls and election day are on the electoral roll at close of rolls.

Also, that electors who turn 18 between the opening of pre-poll and election day can vote on any day, even though they may not yet have turned 18 on the day they vote.

Proposal 11 – Ensuring integrity at all polling locations.

The AEC is to develop an enhancement to its website. This enhancement will allow anyone to report all instances of what can broadly be termed; “election interference.”

Examples of election interference include, but are not limited to: abuse; intimidation; coercion; harassment; physical violence; destruction, or removal of lawful election material.

Proposal 12 – JSCEM to determine if proportional representation in the House is constitutional.

This proposal would ensure parliamentary representation is far more in line with the wishes of voters than the current system delivers.

Proposal 13 – New Senate Determination process.

I propose that the Commonwealth Electoral Act (1918) is amended, to include a new Senate Determination process as detailed above. And that this process takes effect on the 1st of July 2028.

This will ensure that all Australians, regardless of which State or Territory they reside, have a voice that is as equal as possible at each federal election.

Should the JSCEM have any questions, require clarification or additional information in relation to any of the matters raised above, it should have no hesitation in reaching out to me to address those concerns.
